

IFrame Module

Displaying an External URL in an IFrame

How to display an external URL such as a website page, an image or a file in the IFrame module.

1. Select **Edit IFrame Options** from the module menu - OR - click the [Edit IFrame Options](#) link.
2. Go to the **Options** section.
3. At **Source**, select **URL (A Link To An External Resource)**.
4. In the **Location: (Enter The Address Of The Link)** text box, enter the URL of the content to be displayed. E.g. <http://www.domain.com/brochures/document.docx>
5. The following **OPTIONAL** settings are available and it is **recommended** that they be set:
 - a. In the **Width** text box, enter the width for the IFrame in either pixels (E.g. **700**) or as a percentage (E.g.**100%**). If no width is entered a default width of 280px will be used.
 - b. In the **Height** text box, enter a height for the IFrame in pixels. If no height is entered a default height of 130px will be used.
 - c. At **Scrolling**, set the scroll bar properties from the following options:
 - **Auto**: A scroll bar will be displayed only when scrolling is required.
 - **No**: No scroll bar is displayed. If **No** is selected ensure that the height and width settings for the IFrame are big enough to display the desired content as users will be unable to scroll.
 - **Yes**: A scroll bar will be displayed at all times.
 - d. At **Border**, select **No** for no border, or **Yes** to display a border around the IFrame.
6. **Maximize** the **Other Options** section.
7. The following additional **OPTIONAL** settings are available:
 - a. At **Allow Transparency**, check the check box to enable transparency on the IFrame, or **uncheck** to disallow transparency.
 - b. In the **Name** text box, enter a name for this IFrame content. This name specifies a unique name of the iframe (to use in scripts or as targets for links/iframes).
 - c. In the **Tool tip** text box, enter the tool tip to be displayed when the user hovers their mouse over the IFrame.
 - d. In the **Css Style** text box, enter a Css style to be used.
 - e. In the **Onload (JavaScript)** text box, enter the JavaScript to be executed when the page loads. This field can only be set by Administrators. You can do things like `alert("Here's my IFrame")` which will pop up an alert box.
8. Click the [Save](#) link.

Displaying an Internal File in an IFrame

How to display an internal file such as an image or document in the IFrame module. Note: If the document opens in a new window this is a result of a setting on your website browser.

1. Select **Edit IFrame Options** from the module menu - OR - click the [Edit IFrame Options](#) link.
2. Go to the **Options** section.
3. At **Source**, select **File (A File On Your Site)**.
4. At **File Location/File Name**: select or upload the required file.
5. The following **OPTIONAL** fields are available and recommended:
 - a. In the **Width** text box, enter the width for the IFrame in either pixels (E.g. **700**) or as a percentage (E.g. **100%**). If no width is entered a default height of 280px will be used.
 - b. In the **Height** text box, enter a height for the IFrame in pixels. If no width is entered a default height of 130px will be used.
 - c. At **Auto Height**, check the check box to automatically display the IFrame at 100% for this file, or uncheck to disable. This option only works for files located on your website.
 - d. At **Scrolling**, select **one** of the following options:
 - **Auto**: A scroll bar will be displayed only when scrolling is required.
 - **No**: No scroll bar is displayed. If **No** is selected ensure that the width and height (or autoheight) settings for the IFrame are large enough to display the desired content as users will not be able to scroll.
 - **Yes**: A scroll bar will be displayed at all times.
 - e. At **Border**, select **No** for no border or select **Yes** to display a border around the IFrame..
6. **Maximize** the **Other Options** section.
7. The following additional **OPTIONAL** fields are available:
 - . At **Allow Transparency**, check the check box to enable transparency on the IFrame, or uncheck to disallow transparency.
 - a. In the **Name** text box, enter a name for this IFrame content. This name specifies a unique name of the IFrames (to use in scripts or as targets for links/IFrames).
 - b. In the **Tool Tip** text box, enter the tool tip to be displayed when the user hovers their mouse over the IFrame.
 - c. In the **Css Style** text box, enter a Css style to be used.
 - d. In the **Onload (Javascript)** text box, enter the JavaScript to execute when the page loads. This field can only be set by Administrators.
8. Click the [Save](#) link.

Editing an IFrame

How to edit the settings of the IFrame.

1. Select **Edit IFrame Options** from the module menu - OR - click the [Edit IFrame Options](#) link.
2. Edit one or more settings as required.
3. Click the [Save](#) link.

Editing the IFrame

Adding QueryString Parameters

QueryString parameters are useful for passing information from your DotNetNuke website to the website you are showing in the IFrame. For example: Let's say you have a website showing in the IFrame that needs to know the first name of your user so it can show their first name. In the page you could pass the first name through by entering FirstName in the Name text box and by selecting User's First Name from the Value drop-down list. This only works if the website in the IFrame knows how to pick up these parameters from the QueryString. Therefore when setting these values you need to know the names of the parameters which the target website can use from the QueryString.

Here's how to add QueryString Parameters to the IFrame module.

1. Select **Edit IFrame Options** from the module menu - OR - click the [Edit IFrame Options](#) link.
2. **Maximize**  the **QueryString Parameters** section.
3. Click the [Add QueryString Parameter](#) link.
4. In the **Name** text box, enter a name for the QueryString. E.g. TabID
5. Select a parameter type from the following options:
 - Static Value
 - Pass-Through QueryString
 - Pass-Through Form Post
 - Custom User Property
 - Portal ID
 - Portal Name
 - Tab ID
 - User ID
 - User's Username
 - User's First Name
 - User's Last Name
 - User's Full Name
 - User's Email
 - User's Website

- User's IM
 - User's Street
 - User's Unit
 - User's City
 - User's Country
 - User's Region
 - User's Postal Code
 - User's Phone
 - User's Cell
 - User's Fax
 - User's Locale
 - User's TimeZone
 - User's Authorized Flag
 - User's Lock Out Flag
 - User's SuperUser Flag
6. **OPTIONAL.** Enter a value in the third text box which will be displayed if either Static Value, Pass-Through QueryString, Pass-Through Form Post, or Custom User Property are selected
 7. Click the **Save**  button.
 8. Repeat Steps 4-6 to add additional QueryStrings
 9. Click the Save link.
